Tramadol reduces pain in **two powerful ways**:

1. **Opioid Action** – It binds to specific receptors in the brain that block pain signals.
2. **Neurochemical Boost** – It increases serotonin and norepinephrine levels, which helps your nerves handle pain better.

This dual action makes it effective for chronic pain, post-surgery pain, and injury-related pain.

Why Doctors Prescribe Tramadol

Doctors usually prescribe Tramadol for:

- Back pain or nerve pain
- Post-operative pain
- Injury-related pain
- Osteoarthritis or chronic joint pain

It is chosen when **regular painkillers are not strong enough.**
